Iran has three options: Leave the deal, to which Iran was not a party; remain a party to the agreement, which would legally require Iran to comply with the terms of the agreement and further restrict its nuclear program; or break the agreement and face the devastating consequences of crippling economic sanctions. After the announcement on Thursday, Iran's Supreme Leader Ayatollah Khamenei vowed that Iran will not leave the JCPOA, but reiterated his previous call to the Iranian people to "wipe the head of the U.S. from the map."Q: Accessing static method from another class Hi I'm having a problem accessing the method from another class inside the class where I'm calling it from. I have a main method, which starts a new thread where all the user input is sent to and the login of that data is done. The login is done inside another class that I can't modify so I have to call that class from my main thread. public class Main{ public static void main(String[] args){ String input = (String) wait.get(0).getInput(); CustomerService cust = new CustomerService(); cust.start(); } public class CustomerService extends Thread{ public String input = ""; void process(){ System.out.println("User's input is " + input); public CustomerService(){ setName("new Thread"); setDaemon(false); setPriority(Thread.NORM_PRIORITY + 1); public void run(){ while(!Thread.currentThread().isInterrupted()){ if(log 82157476af
